Guidelines

1. The capacity of a single indoor unit must not be less than 50% of the outdoor unit's rated capacity and the total capacity of indoor units must not be less than 40% of the outdoor unit's rated capacity
2. The maximum capacity of a single indoor unit must be 6kW
3. The system only allows one indoor unit of 5kW and above
4. The total combined capacity must not exceed 182.7% of the outdoor unit's rated capacity
5. An undersized indoor coil (relative to the outdoor unit) may trigger high-pressure protection during high-ambient cooling operations
6. An oversized indoor coil (relative to the outdoor unit) may cause low-pressure protection during low-ambient heating, condensation issues and elevated compressor discharge temperature during cooling mode

Guidelines

1. The capacity of a single indoor unit must not be less than 50% of the outdoor unit's rated capacity and the total capacity of indoor units must not be less than 40% of the outdoor unit's rated capacity
2. The maximum capacity of a single indoor unit must be 8kW
3. For two indoor units combination, the system allows only one indoor unit of 7kW and above
4. For three/four indoor units combination, the system allows only one indoor unit of 5kW and above
5. The total combined capacity must not exceed 178.5% of the outdoor unit's rated capacity
6. An undersized indoor coil (relative to the outdoor unit) may trigger high-pressure protection during high-ambient cooling operations
7. An oversized indoor coil (relative to the outdoor unit) may cause low-pressure protection during low-ambient heating, condensation issues and elevated compressor discharge temperature during cooling mode

Combination Table

Guidelines

- The capacity of a single indoor unit must not be less than 50% of the outdoor unit's rated capacity and the total capacity of indoor units must not be less than 40% of the outdoor unit's rated capacity
- The maximum capacity of a single indoor unit must be 8kW
- For two indoor units combination, the system allows only one indoor unit of 7kW and above
- For three/four/five indoor units combination:
The system allows only one indoor unit of 7kW and above, and the capacity of other indoors should be ≤3.5kW
The system allows maximum two indoor units of 5kW or 6kW and the capacity of other indoors should be ≤3.5kW
- The total combined capacity must not exceed 148.9% of the outdoor unit's rated capacity
- An undersized indoor coil (relative to the outdoor unit) may trigger high-pressure protection during high-ambient cooling operations
- An oversized indoor coil (relative to the outdoor unit) may cause low-pressure protection during low-ambient heating, condensation issues and elevated compressor discharge temperature during cooling mode

Combination Table
