

Gas fireplace Wi-Fi control

User guide

Rinnai

Rinnai gas fireplace Wi-Fi control

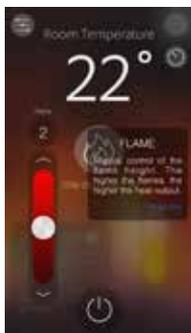

The Rinnai fireplace app allows complete control of your Rinnai gas fire, with up to four devices¹ being able to connect to the one fire. For commercial applications up to 30 fires can be run off the one app.

Thermostat function

Enables you to set a comfortable temperature and then have the fire do the rest. The fire will automatically modulate, like an air conditioning unit, to maintain the room at the temperature you have set.

The room temperature, visible at the top of the screen takes the temperature from a thermistor in the fire.

Flame function

Ideal for those that love a full-flame picture regardless of the room temperature. This doesn't operate on a thermostat, so best to switch back to thermostat if you plan on leaving the room.

¹ Maximum of four people can operate the fire at one time

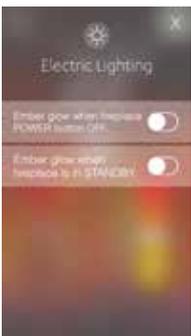

Timers

For those that love ultimate control, multiple timers can be set and changed for every day of the week. A maximum of eight timers can be set.

Lighting

If you have an Ember or Linear 800 FlameTech fire you have the option of having the LED lighting turned on when the fire is on standby—access lighting from the options menu.

Economy

When the room temperature exceeds the preset temperature by 2°C, the burner will reduce to an extra low setting in order to decrease the room temperature. Refer p.13 for more information.

Important

On the back of your gas fire operation guide is a serial number for your fire. You **MUST HAVE** this to register your fire and use the app. We recommend taking a photo or noting it down, just in case you misplace your guide.

From time to time there will be firmware updates (like an operating system update) with new and improved features. It is important when doing the update not to close or lock your phone. You may need to adjust your auto-lock from two to four minutes. If for some reason the update fails or gets 'stuck', switch off the mains power to your fire, wait one minute, close the app, switch the power to your fire back on, and relaunch the app. The update screen will be displayed and the update will continue. You will need to do the firmware update to use the app.

Rinnai Wi-Fi control

System requirements

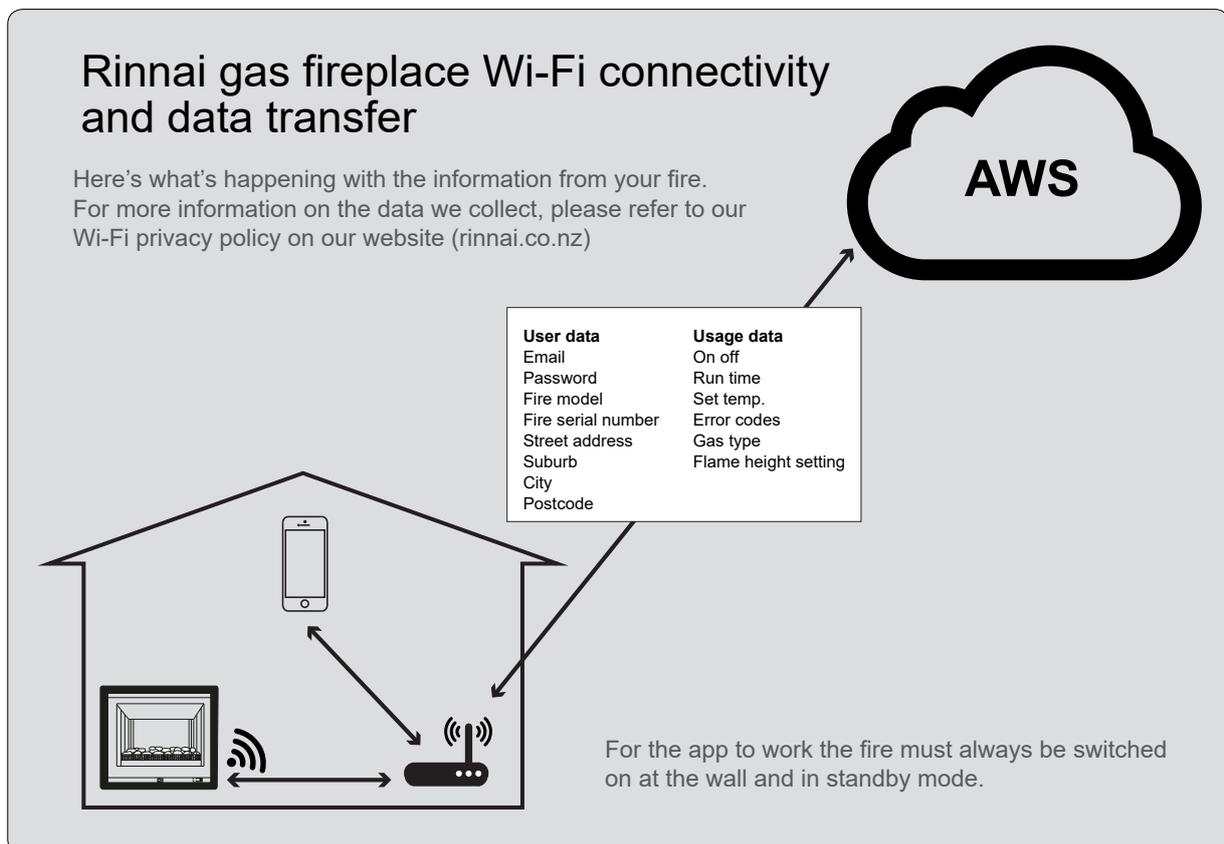

The Rinnai Wi-Fi fire app will run on the following devices:

- Apple devices using iOS 10.0 and above
- Android 4.4 API level 19 and above
- Wi-Fi router running on 2.4 GHz (not 5 GHz)—check the Wi-Fi settings on your device
- Wi-Fi signal three bars or higher

Summary of how it all works

1. Wi-Fi module is installed, or retrofitted into the fire and checked to make sure it is working.
2. Homeowner downloads the app on their smart device.
3. Through the app, the Wi-Fi in the fire links (pairs) to the homeowners smart device.
Important: Only one person can connect to the Wi-Fi module, otherwise you will receive a cannot connect error message.
4. Homeowner, through the app, is taken through the registration process—they will need the serial number from the back of the operation guide.
5. The app process then links the Wi-Fi in the fire to the Wi-Fi router in the home—essentially making the smart device the fireplace controller.

Rinnai Wi-Fi connection process - Apple

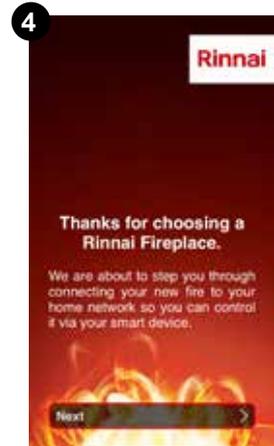

Find the Rinnai Wi-Fi module app, place 'Rinnai' into the search field, download, and **OPEN**.

Find the app on your smart device and open.

As this is the first time setting up, the above message will appear, select **New Setup**.

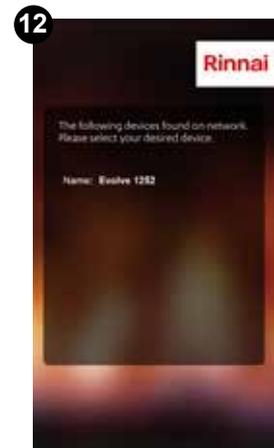

Select **Next**, this will step you through the connection process.

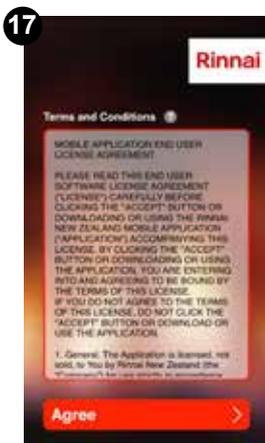

The home Wi-Fi is now trying to connect to the Wi-Fi module in the fire.

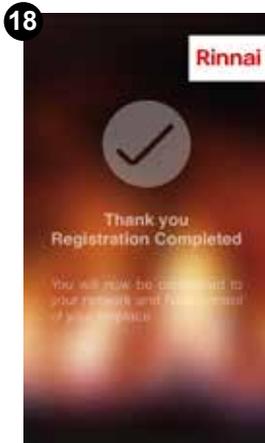

If the connection is successful this screen will **briefly** appear—you may miss it.

Shows the number of Rinnai fires available to connect to, select the fire and OK.

Agree terms and conditions.

If registration is successful this screen will **briefly** appear.

App will now connect you with the fire.

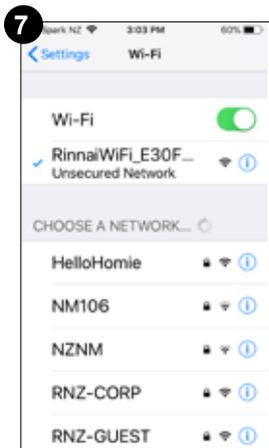

Enter your email, password, and **Login**.

Ensure the fire is on, select **Next**.

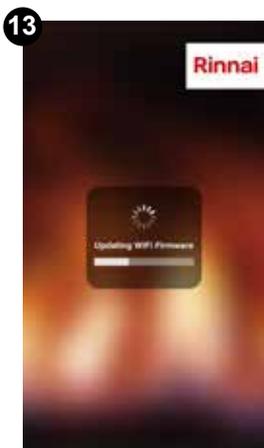

Close the app and go into **Settings** on your device.

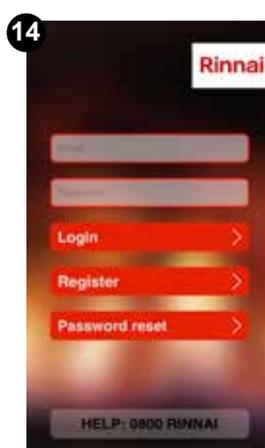

In **Settings** (Wi-Fi) select **RinnaiWiFi_XXXXX_**, this is the Wi-Fi module in the fire. This connects your device to the fire.

Reopen the app. Select your home Wi-Fi from the list, enter your password, and click **OK**. Signal strength needs to be three bars or higher.

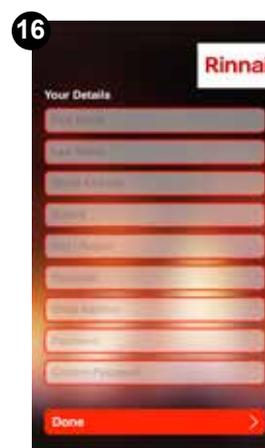

If there is a firmware update then you will see this screen. If updating DO NOT close the app or lock your screen.

Select **Register**—so the fire can be matched to you.

Name your fire, if you have two you might want to name the location, and enter your serial number, this is located on the back of your operation guide.

Complete **Your Details** and select **Done**.

All systems connecting.

Success, you are now operational.

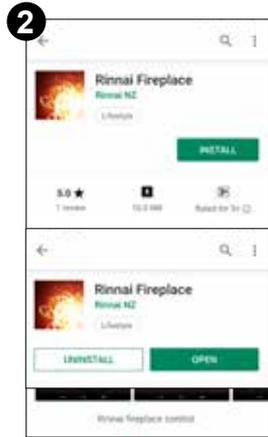

Tips and troubleshooting

- On initial startup the Wi-Fi module in the fire scans for a Wi-Fi network, and if at first it doesn't work it will only scan again after ten minutes. This is the time to start those deep breathing exercises.
- If the 'search' and 'connecting' screens hang for more than two minutes, close and reopen the app.
- Remember the Wi-Fi signal strength needs to be three bars or greater. The majority of problems will be signal strength on connection.
- If you made an error in the setup in naming your fire you can change this. Press and hold the fireplace to edit the name, a popup screen will appear asking if you wish to rename [existing fire name], enter the new name and 'Save'.

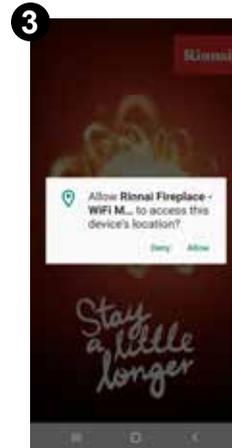

Rinnai Wi-Fi connection process - Android

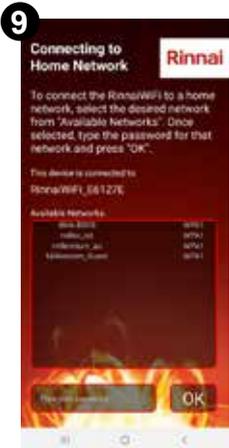

Find the Rinnai Wi-Fi module app, place 'Rinnai' into the search field, download, and **OPEN**.

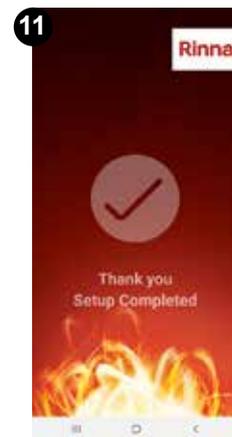

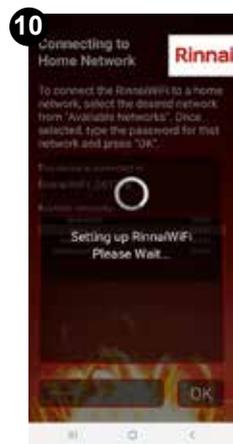

Install and Open.

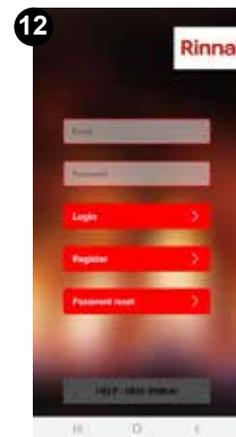

Allow to continue the process.

The home Wi-Fi is now trying to connect to the Wi-Fi module in the fire. Click on your home Wi-Fi and enter the password.

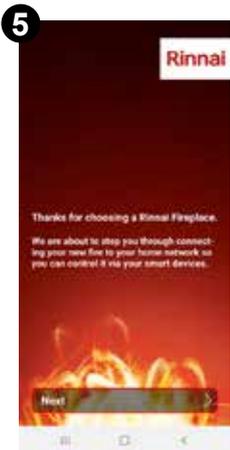

If the connection is successful this screen will **briefly** appear—you may miss it.

Select **Register**—so the fire can be matched to you.

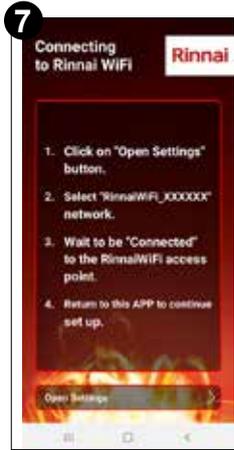

Success, you are now operational.

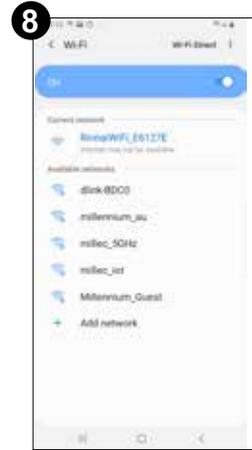

Select **Next** this will step you through the connection process.

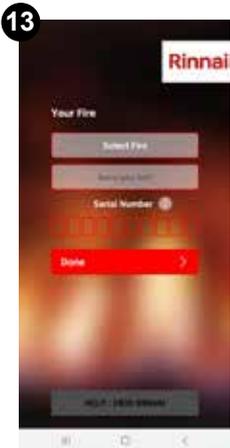

Ensure the fire is on, select **Next**.

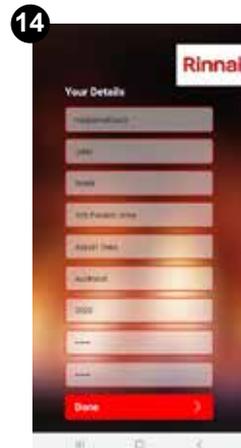

Close the app and open 'Settings' (we know this conflicts with what's written on the screen).

In **Settings** select **RinnaiWiFi_XXXXX**, this is the Wi-Fi module in the fire. This connects your device to the fire.

Select your fire, name your fire, if you have two you might want to name the location, and enter your serial number, this is located on the back of your operation guide.

Complete **Your Details** and select **Done**.

Agree terms and conditions.

All systems connecting.

Operation: Thermostat function

Each time the Rinnai Fire app is opened, the Wi-Fi network will be looking for the Wi-Fi module in the fire, remember the power to the unit needs to be on (in standby), just like your TV. Once the connection has been established (approx. 20 secs) a list of connected devices will appear, select the fire and press ok.

The app will default to showing the status of the fire, i.e. turned off (red power button), and the room temperature.

To switch the fire on, press the red power button and you'll get the green 'Starting Up' light, and approximately 30 seconds to a minute later the 'Room Temperature' screen will appear.

To adjust the set temperature you can either drag the button, or use the up and down arrows. You will hear an audible beep each time you change the setting. Don't be too speedy as the fire needs to register the signal and change accordingly. Also after startup it will be approximately 3-5 minutes before the fire fan starts up.

In thermostat mode the fire operates like an air conditioning unit, automatically modulating the fire settings to achieve and maintain the set temperature.

Room temperature display

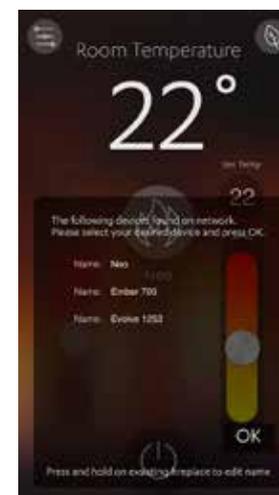

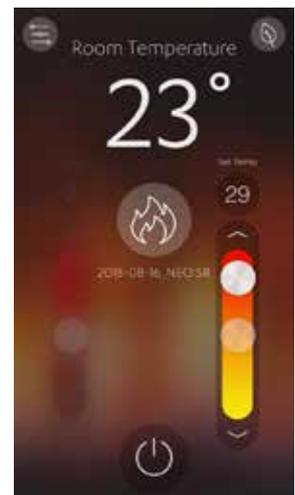

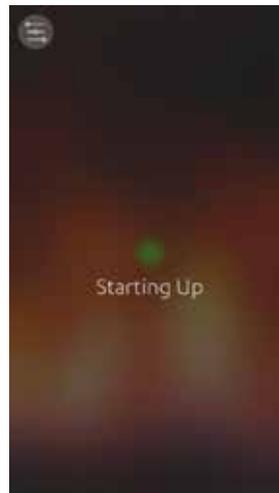

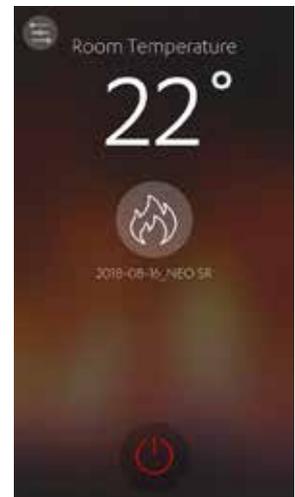

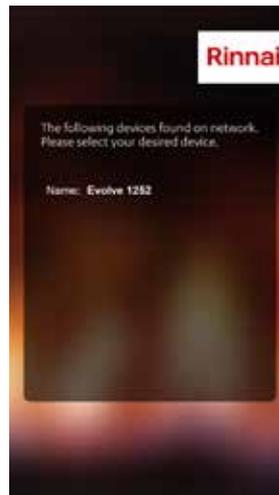

The room temperature displayed on your device is based on a temperature thermistor reading from within the fire.

Why two circles on the temperature bar?

The bright white circle represents the set temperature setting, and the transparent circle displays the actual room temperature. As the room temperature increases to the set temperature the circles will gradually merge together.

Flame icon

If you press the flame icon, just under the temperature display, a popup text screen will appear with a list of available connected devices—some homes will have more than one fire. This allows you to switch control from one fire to another.

Operation: Flame function

This allows manual control of the fire, so rather than having a set temperature 'Flame' mode allows you to control the flame picture of the fire, regardless of the room temperature.

This doesn't operate on a thermostat, so best switch back if you plan on leaving the room.

As with the thermostat, to change the flame settings, drag on the bar, or use the up and down arrows—flame settings are from 1-5, 5 being the highest flame setting.

This explanation text box displays if the 'Show Hints' box is ticked (accessible from the options screen).

Operation: Timers

Really really important

The timer operation function cannot be accessed remotely, so please remember to switch off all timers if you plan on going away for any period of time.

To access the timer functionality, select the menu icon, the three circled lines in the top left corner of the screen. Select 'Timers' from the options menu.

Just a reminder that you need to be in the home with your smart device for this to work.

Adding timers

'Add New', then select the days you want the timer to operate, the on time, the off time, the set temperature, and save.

In the example shown, there are two timer periods for Mon-Fri, and one timer period for the weekend.

Mon-Fri

- On at 6am, switches off at 8am
- On at 5:30pm, switches off at 9:30pm
- Set temperature 20 °C

Sat-Sun

- On at 7am, switches off at 9am
- Set temperature 20 °C

When the fire is running off a timer a 'timer' icon will appear on the screen, refer last image on this page. A beep will also signify that the timer has come on.

Timer FAQ's

Will the timers work when I'm not in the house?

Yes, when you set up the timers the signal gets sent to the PCB of the fire. This means the timers will work even if you are not at home.

Can I override the timer?

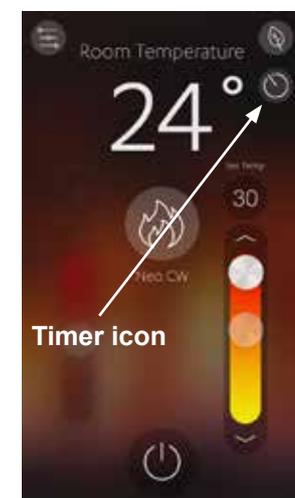

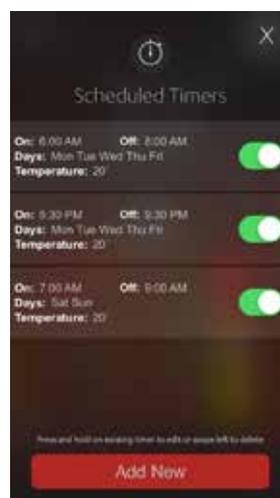

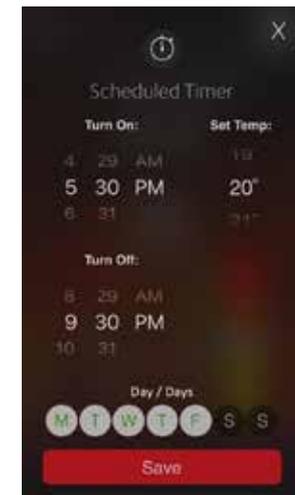

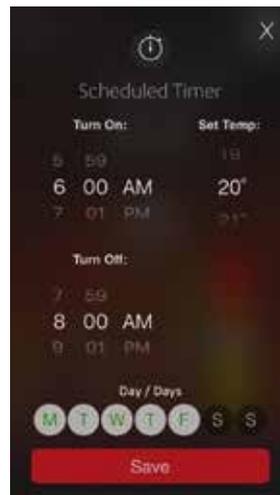

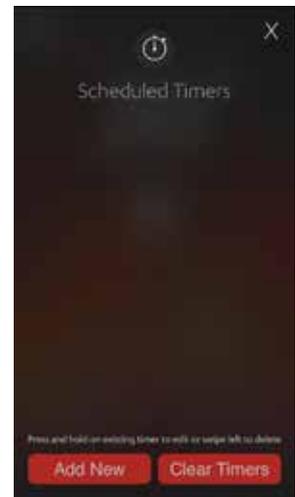

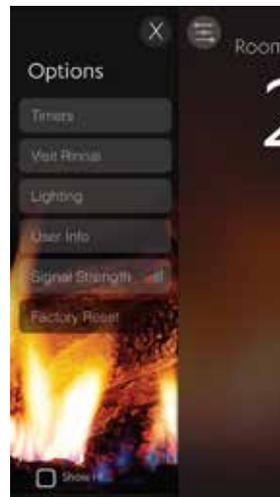

Yes, you can still switch the fire on and off which will temporarily override the timer. This can be done remotely as well.

Do the timers have the preheat function like some of your other fires?

No, the timer will only come on at the designated 'Turn on' time.

How many timers can you have?

A maximum of eight.

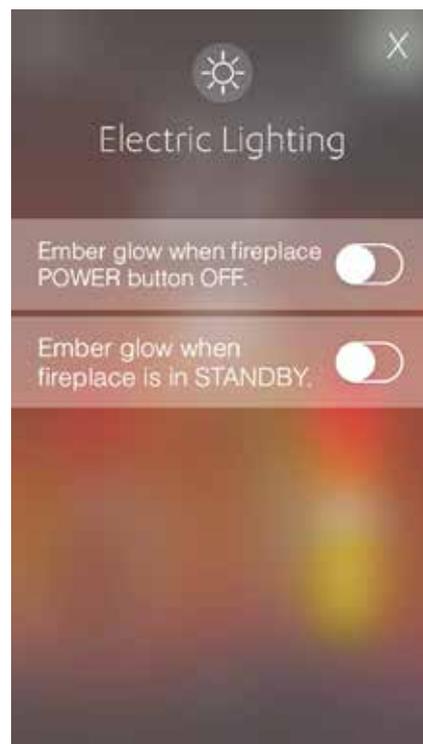

Operation: Lighting

This feature is only available for the following Rinnai gas fires:

- Rinnai Ember 600/700
- Rinnai Linear 800 FlameTech

To access the lighting function, select the menu icon, the three circled lines in the top left corner of the screen. Select 'Lighting' from the options menu.

Activate if you want the lighting to be on when the fire is not.

Operation: Economy

Economy will ONLY work in thermostat mode. If you press the economy icon while in thermostat mode, you will hear a beep and the leaf symbol on the top right will be white, as shown in the image.

Economy function explanation

In some instances, even while in thermostat mode, the room temperature can still increase, especially if the room size is small. With 'economy' on, if the room temperature rises 2 ° above the set temperature and stays there for 1-2 minutes, the economy feature will switch to the lowest burner setting, and in some cases go to pilot flame only. If the room temperature goes below the set temperature, the burner will return to normal to maintain the room temperature.

Error codes

Your Rinnai gas fireplace has self diagnostics that monitor the appliance during startup and operation. Should a fault occur the heater will shut down. The fault that has caused the shut down will be indicated via the Wi-Fi app on your smart device with a suggested action.

Unfortunately for the majority of faults a service call is required. The only faults that the homeowner can possibly rectify are:

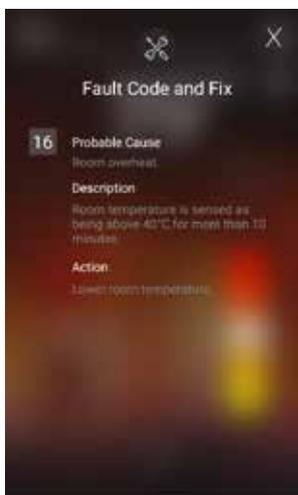

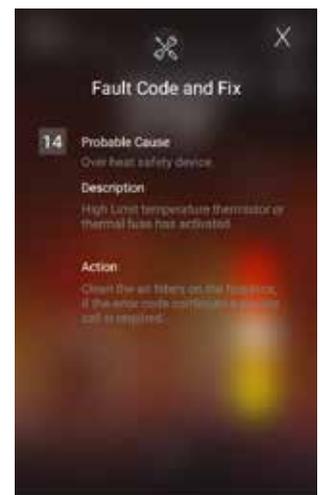

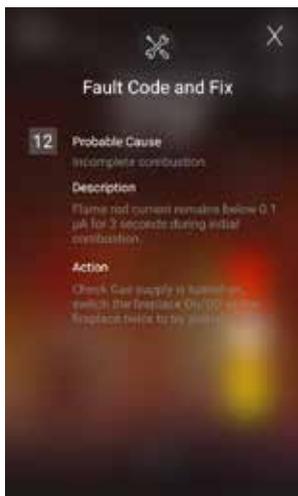

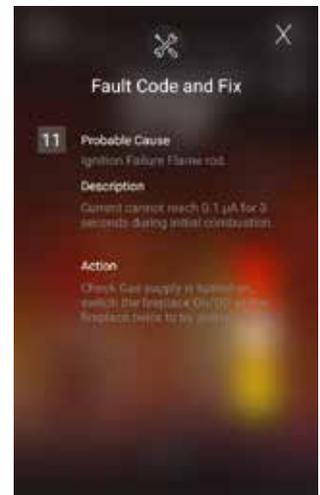

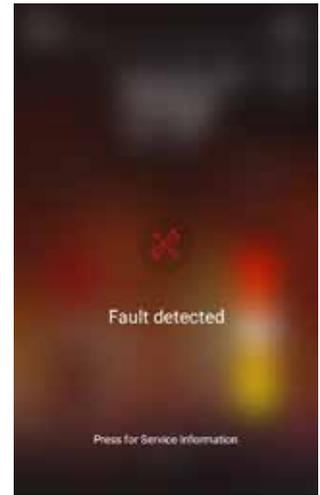

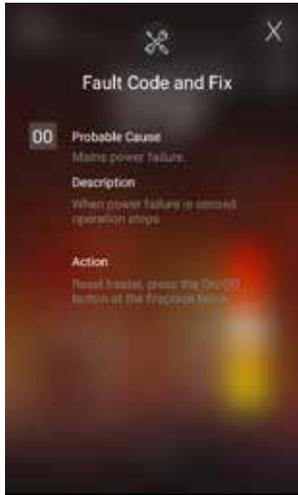

- 00 mains power failure
- 11 ignition failure
- 12 incomplete combustion
- 16 room overheat
- 90 communication error
- 91 communication error

Error codes and their likely causes can also be found in the operation guides of each fire. It will look like this.

Error code	likely cause	suggested action
00	Mains power failure	Make sure the power is on. Press the On/Off button on the control panel or remote control to turn the fire back on.
11	Ignition failure	Check the gas supply is switched on. Turn the heater On/Off On again. If the problem continues please call us for help.
12	Incomplete combustion	Flue blockage
16	Overheat safety device	Service call
90	Room overheat	Check room temperature is below 42°C.
91	Room temperature sensor faulty	Service call
92	Overheat sensor(s) sensor faulty	Service call
93	Overheat sensor(s) sensor faulty	Service call
94	Overheat sensor(s) sensor faulty	Service call
95	Overheat sensor(s) sensor faulty	Service call
96	Overheat sensor(s) sensor faulty	Service call
97	Overheat sensor(s) sensor faulty	Service call
98	Overheat sensor(s) sensor faulty	Service call
99	Overheat sensor(s) sensor faulty	Service call
90	Communication error	Restart fire. If the problem continues please call us for help.
91	Communication error	Restart fire. If the problem continues please call us for help.

Technical description and action text

Don't be put off by the technical description and action text. If a service call is required, this is the information used by the service technician to help diagnose the fault.

Below is a table of the fault code and fixes, they will appear as fault code screens like those on the previous page.

Error code	Probable cause	Description	Action
00	Mains power failure	When power is sensed operation stops.	Reset heater, press the On/Off button at the fireplace twice.
11	Ignition failure flame rod	Current cannot reach 0.1 μ A for 3 seconds during initial combustion.	Check gas supply is turned on, switch the fireplace On/Off twice to try and reignite.
12	Incomplete combustion	Flame rod current remains below 0.1 μ A for 3 seconds during initial combustion.	Check gas supply is turned on, switch the fireplace On/Off twice to try and reignite.
14	Overheat safety device	High limit temperature thermistor or thermal fuse has activated.	Clean the air filters on the fireplace (homeowner cannot do this), if the error code continues a service call is required.
16	Room overheat	Room temperature is sensed as being above 40 °C for more than ten minutes.	Lower room temperature.
31	Room temp. sensor faulty	Open circuit in the temperature thermistor.	Service call.
32	Room temp. sensor faulty	Open circuit in temperature sensor 1.	Service call.
33	Room temp. sensor faulty	Open circuit in temperature sensor 2.	Service call.
53	Spark sensor faulty	Open circuit in spark sensor.	Service call.
61	Combustion fan motor faulty	Open circuit in combustion fan wiring.	Service call.
71	Solenoids faulty	Open circuit or stuck solenoid.	Service call.
72	Flame detection circuit	Open circuit to flame detection.	Service call.
73	Communication error	Main PCB faulty.	Service call.
90	Communication error	Communication error detected between main PCB and Wi-Fi module.	Service call.
91	Communication error	Communication error detected between smart device and Wi-Fi module.	Please check your smart device and Wi-Fi module are within range. Check your network settings.
92	Unknown fault	An unknown fault has occurred.	Service call.

Fault code 90: Communication error between the Main PCB and Wi-Fi module

This possibly requires a reset of the Wi-Fi module in the fire (or on the app). For the Linear this can be done by the homeowner, refer to the instructions in the operation guide. For the Evolve, Ember and Neo the reset can be done on the app, as a last resort for troubleshooting.

Options screen

The 'Timers' and Lighting' functions are explained on p.12-13. Signal strength is explained on p.5.

Visit Rinnai

Option of accessing:

- Rinnai website

User info

Option to update your details, for example, if you change your email address.

The exit door at the top of the screen is a logout screen—in normal day-to-day use you would rarely have to use this. If logged out you would no longer be able to control the fire via the app and a new account would need to be created. The only other reason to use logout will be to reset your password.

Linked appliances

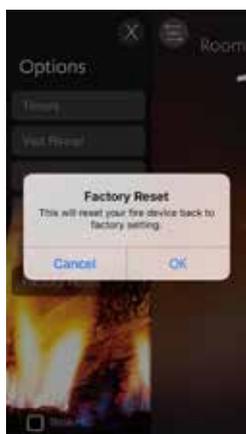

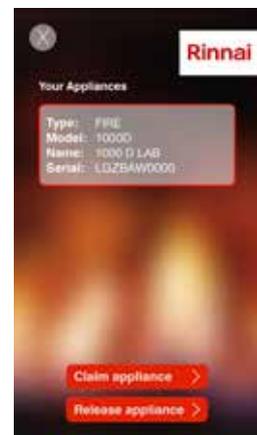

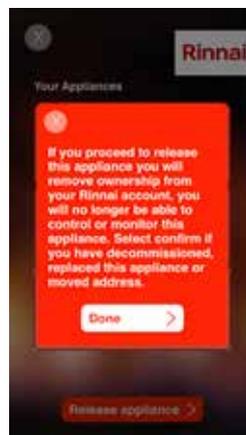

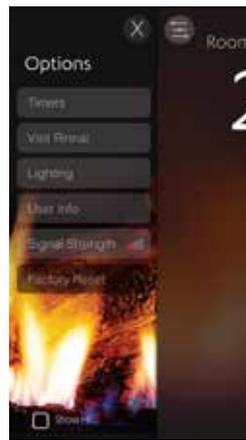

Selecting 'Linked Appliances' allows you to see which gas fires are paired to your phone with an option to claim (if not already) and release the appliance (for example if you move).

Factory reset

This is like 'Control-Alt-Delete' on your computer. This resets the fire to what it was when it was first installed. Only 'reset' if all other troubleshooting options have been exhausted. You will hear multiple beeps once the fire has reset itself.

Claim appliance

If you've moved into a house with a Rinnai Gas Fireplace enabled with Wi-Fi functionality you will have to 'claim' the appliance from the previous owner and complete the registration process.

Remote access functionality

When working via the cloud for the first time you will need to claim the appliance. This is done by accessing the options screen, going into 'User info' and clicking on linked appliances. If setup correctly you should see your fire and have the option to claim.

Remote functionality is designed for access to simple functions like turning the fire on. For example, the weather has turned cold and you want a warm house when you come home from work. It is not designed for setting up the account for when the fire is first installed, this needs to be done in the home.

The timer functionality is not able to be accessed remotely. There will be a feature developed in later versions of the app. You can however temporarily override a timer. For example, you're working late and not due home until 7pm, but have a timer due to come on at 6pm. After the timer has come on, you can 'power off' and this will override the timer.

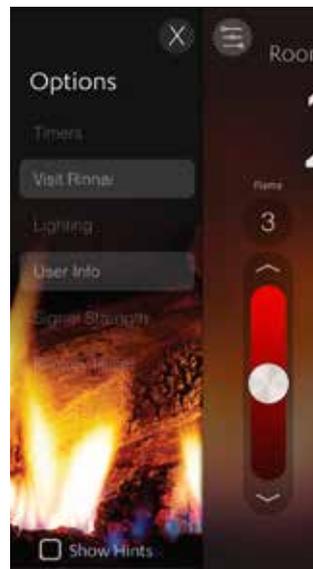

If you are accessing the app and functions remotely, via the cloud, a cloud icon will appear on the screen, refer circled icons in the adjacent images above.

In the options menu, when accessing the app remotely, you will see what functions are available, the others will be greyed out.

Please note:

A smart device connected to the home router will always take priority over a cloud device.

There will be a 10-20 second delay when operating in remote access mode.

Uh-oh: Advice, tips, and troubleshooting

Experience tells us that the majority of problems will be related to your Wi-Fi network or signal strength problems on initial connection. Please work through the advice on this page and general home wireless troubleshooting steps (taken from the Orcon website) first before contacting us, as often you'll be able to fix the problem yourself.

Signal strength fluctuations

The Rinnai fire app requires a signal strength of three bars and above (refer p.5). If you find levels regularly fluctuate below three bars a Wi-Fi booster or extender may be required. Talk to your local electronics expert first to see if this will solve the problem.

Home wireless troubleshooting

1. Reboot your modem

Often when the internet appears to be broken a restart of the modem can solve the problem.

- Turn the modem off at the wall
- Leave it off for at least two minutes
- Turn the modem back on at the wall

The modem will take a few minutes to start up and re-establish the connection. If the problem persists, continue to the next step.

2. A few things to check

Check the actions below to see if they apply to you. These can cause what seems like a wireless network fault.

- Make sure the wireless light on your modem is on.
- Check your mobile device has the Wi-Fi enabled and that your device is connected to your router rather than just mobile data.

Check if the problem is a wireless network issue.

- Plug a computer or laptop into the modem using an Ethernet cable and check all other connections.
- After connecting, wait a minute or two for the wired connection to be established, then open your web browser and visit a known web page such as google.

If you can surf the web as normal, then it indicates a problem with the wireless connection. Stay plugged in and go to the next step.

If your browser is still unable to surf the web at this point, contact your internet service provider for assistance.

3. Test another device

If you have another wireless capable device, try connecting to the network using that. If this device works, then the one that's not working may be the problem.

To find a solution for your device, try a Google search to see if there are any known issues with your device. Your device's manufacturer should also be able to provide support.

If you don't have another device to check with, or the problem is related to all devices, go to the next step.

4a. I can't find or connect to my wireless network

Double check you have Wi-Fi enabled on your device. If this is on contact your internet provider to help you configure your specific model of modem.

4b. Frequent disconnections, slow wireless performance, weak or no signal

Disruptions to your wireless network can come from all sorts of things, including your appliances, the house, and your neighbours' internet.

Consider the location of your router and the location of your devices. The downside to having a wireless network is that the more walls, floors, appliances and obstructions between your device and the router, the weaker the signal strength will be. Ideally your router will be in a central location in the house.

5. Contact your internet provider

If your wireless network still isn't behaving as it should, then please contact your internet service provider support team for assistance.

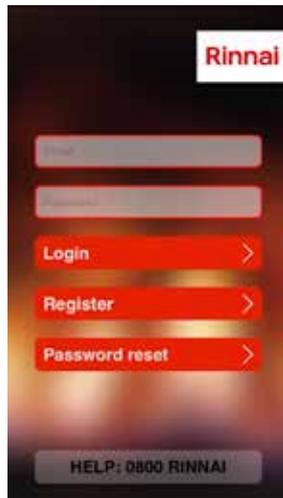

Uh-oh: App specific problems

Incorrect email or password

If you get an email or password error (system will beep multiple times) it will be because during the initial registration you either mistyped your email and/or password.

This is very easy to do (speaking from experience) as some screens are very small.

To fix this problem you will need to re-register, take your time and make sure the characters in the email and password fields are correct. Close and re-open the app, unfortunately you'll need to go through most of the connection process again.

Serial number invalid

The reason for strict validation of the serial number is so the fire can be matched to an individual and/or house. If you get error messages regarding your serial number you will need to call our Customer Services team (0800 746 624) to obtain a correctly formatted ghost serial number.

Simple remote control

Don't forget that you still have your simple remote to operate the fire if for some reason your app isn't working.

Rinnai WiFi not found

Apart from signal strength, which is mentioned on the previous page, there could be an issue with the Wi-Fi module in the fire. For the Linear model you can reset the Wi-Fi module, refer to the operation guide for how to do this, or you can 'Factory Reset' in the options menu. The 'Factory Reset' is also an option if you have an Evolve, Ember, or Neo fire.

One step that can be done before a call to Rinnai, is to turn off the fire at the wall. Wait for a few seconds and then turn the power back on. Sometimes this is enough to reset everything. **Rescan** to see if this solves the problem.
